

1. Summarising Notes

Prompt:

Summarize the following notes on Artificial Intelligence in simple language and provide the key points in bullet form:

Artificial Intelligence is a branch of computer science that enables machines to perform tasks that normally require human intelligence. AI can learn from data, recognize patterns, make decisions, and solve problems.

AI Response:

Summary:

Artificial Intelligence enables machines to perform tasks that usually require human intelligence.

Key Points:

- AI is a branch of computer science.
- AI learns from data.
- AI can recognize patterns.
- AI helps in decision-making and problem-solving.

Why the prompt worked:

It worked efficiently because it gives us the main definition separately and attaches the key points clearly as we asked.

2. Generating a Study Plan

Prompt:

Create a 30-day study plan for learning AI, Machine Learning, Python, GitHub, and APIs as a beginner.

AI Response:

Simple 4-Week AI & ML Learning Plan

Week 1: Python Basics

Learn Python setup

Variables and data types

If-else statements

Loops

Functions

Lists and dictionaries

Task: Create a simple calculator using Python.

Week 2: GitHub & APIs

Create a GitHub account

Learn Git basics (commit, push, pull)

Create repositories

Learn what APIs are

Fetch data from a simple public API

Task: Upload your Python project to GitHub.

Week 3: Artificial Intelligence Basics

Introduction to AI

Types of AI

AI applications in daily life

AI ethics

Introduction to Machine Learning

Task: Research and write about one AI application.

Week 4: Machine Learning Basics

Introduction to Machine Learning

Types of Machine Learning

Data preprocessing

Simple ML models

Model evaluation

Task: Build a basic prediction model and upload it to GitHub.

Why the Prompt Worked:

It gives me a plan clearly that what to learn and when to learn for the assigned time period

3. Creating Interview Questions

Prompt:

Generate 10 interview questions for a student applying for an AI and Machine Learning internship.

AI Response:

1. What is Artificial Intelligence?
2. What is Machine Learning?
3. What is Generative AI?
4. Explain supervised learning.
5. What is a dataset?
6. What is Python used for?
7. What is GitHub?
8. What is JSON?
9. What is an API?
10. Explain one AI project you completed.

Why the Prompt Worked:

Here it gives me the interview questions which are mandatory for a student for AI & ML internship

4. Writing a Resume Summary

Prompt:

Write a professional resume summary for a student who completed an AI and Machine Learning internship

AI Response:

Motivated and detail-oriented student with hands-on experience in Artificial Intelligence and Machine Learning through a structured internship program. Gained practical knowledge in data preprocessing, machine learning algorithms, model development, and data analysis. Proficient in Python and familiar with AI/ML tools and frameworks. Demonstrated strong problem-solving, teamwork, and communication skills while working on real-world projects and assignments. Eager to apply technical expertise and continue learning in a challenging and innovative environment.

Why the Prompt Worked:

It tells the what features can a student have after the completion of an internship training

5. Creating a Lesson Plan

Prompt:

Create a one-hour lesson plan for teaching beginners about Artificial Intelligence

AI Response:

One-Hour Lesson Plan: Introduction to Artificial Intelligence

Lesson Title

Introduction to Artificial Intelligence for Beginners

Duration

60 Minutes

Learning Objectives

By the end of the lesson, students will be able to:

1. Define Artificial Intelligence (AI).
2. Identify common applications of AI in daily life.
3. Understand basic AI concepts such as Machine Learning and Data.
4. Discuss the benefits and challenges of AI.

Materials Needed

- Computer and projector
- Presentation slides
- Internet access (optional)
- Whiteboard and markers

Lesson Outline

1. Introduction and Icebreaker (10 Minutes)

- Ask students: "Where have you seen AI today?"
- Collect answers such as voice assistants, social media recommendations, navigation apps, and chatbots.
- Briefly introduce the topic of AI.

2. What is Artificial Intelligence? (10 Minutes)

- Define AI as the ability of machines to perform tasks that typically require human intelligence.
- Explain examples:
 - Voice assistants
 - Face recognition

- Recommendation systems
- Self-driving cars

3. Basic AI Concepts (15 Minutes)

- Explain Data: Information used to train AI systems.
- Explain Machine Learning: AI learns patterns from data.
- Explain AI Models: Systems trained to make predictions or decisions.
- Use a simple example such as teaching a computer to recognize cats and dogs from pictures.

4. Real-World Applications of AI (10 Minutes)

- Healthcare: Disease prediction
- Education: Personalized learning
- Banking: Fraud detection
- Transportation: Navigation and autonomous vehicles
- Entertainment: Movie and music recommendations

5. Benefits and Challenges of AI (10 Minutes)

Benefits:

- Automation of repetitive tasks
- Increased efficiency
- Improved decision-making

Challenges:

- Privacy concerns
- Bias in AI systems
- Job displacement
- Ethical considerations

6. Quiz and Discussion (5 Minutes)

Questions:

1. What does AI stand for?
2. Name one example of AI in daily life.
3. What is Machine Learning?
4. Mention one benefit and one challenge of AI.

Assessment

- Participation in discussion
- Responses during quiz
- Ability to identify AI applications

Conclusion

Summarize key concepts and encourage students to explore AI tools and technologies further.

Why the Prompt Worked:

It gives solution for our prompt that explain every point about artificial intelligence clearly in 60 mins
